THE NEXT GOOD THING – BABY MATTRESSES

Often mattress makers cajole the public with the phrase "you spend a third of your life asleep", alluding to the required 8 out of 24 hours that we should spend sleeping every day. From a medical point of view, it would be wise to ask **WHAT PART OF LIFE DO YOU THINK ABOUT** when talking about this third? Indeed, we enter life – sleeping, because babies do it better, more intensely, and longer than adults, and so the mattress is the second most important bed for the newborn. The most important, as is known, are the arms of the parents.

SMALL SLEEPERS, BIG SLEEPYHEADS

There are several key factors that make a significant difference between small and large sleepers:

- 1. THE WEIGHT WITH WHICH THE BODY MAKES PRESSURE ON THE MATTRESS:** is much smaller. Namely, the baby in the cradle weighs about 3 kg and leaves it when it reaches about 15 kg. It is clear that the compressive force on the surface is much lower than that produced by an adult's body.
- 2. THE DURATION OF STAYING IN THE BED:** Children sleep in a so-called multi-phase sleep pattern, because, in addition to the night sleep, they also have several sleep episodes during the day and spend more than 16 hours in bed.
- 3. CHILDREN LEAVE TRACES OF THEIR PRESENCE:** they exude the excess contents in a liquid or mushy state, either after feeding or when they start potty training – be prepared to wash the mattress cover more often than your own.
- 4. THE WAY THEY SLEEP** differs during the first two years of the child's stay in bed. You will notice that your still baby first learned to turn from the back to the tummy and vice versa, and you will soon find it in a completely different position from the one in which it fell asleep.
- 5. FOR A BABY, THE BED IS NOT ONLY A SLEEPING PLACE,** but also a playground which helps it to get to know the environment and become aware of the things around it. Most of them get up for the first time by pressing their feet against the mattress they sleep on!

BABY KOKO

A baby mattress without a spring core, which is supported by a "sandwich" of layers of latex foam and coconut fiber, where coconut provides stability and support, and latex foam provides comfort. The natural layers that make up the entire mattress ensure maximum ventilation (exceptional breathability) and durability.

- Natural layers of coconut and latex
- Without spring core
- Air permeability
- Removable washable Tencel cover
- Adjustable sizes
- Height 14 cm

BABY LOVE

The heart of the baby mattress is a mini- pocket spring core that offers flexibility and stability. The comfort layer consists of HR foam with optimized density which, together with the core, combines stability, comfort and air permeability. The final layer consists of a removable, washable cover interwoven with Tencel fibers which provide additional surface comfort.

- Mini pocket spring core
- Support for small joints and back
- Air permeability
- Removable washable Tencel cover
- Height 14 cm

BABY CARE

The heart of the baby mattress is a mini- pocket spring core that offers flexibility and stability. The comfortable layer consists of latex foam which allows natural ventilation, offering "pleasant firmness" and ensuring peaceful sleep. The final layer consists of a removable, washable cover that is interwoven with Tencel fibers.

- Mini pocket spring core
- Air permeability
- Support for small joints and back
- Breathable Latex
- Removable washable Tencel cover
- Height 14 cm

BABY DREAM

The heart of the baby mattress is a mini-wire pocket wire core that offers flexibility and stability. The comfort layer consists of viscoelastic foam at a height which allows the ventilation of the mattress, providing a soft cushioning and perfect adaptability. The final layer consists of a removable, washable cover interwoven with Tencel fibers which provide additional surface comfort.

- Mini pocket spring core
- Support for small joints and back
- Breathable memory
- Air permeability
- Removable washable Tencel cover
- Height 14 cm
